EDUCATION

Florida State University

(Expected) May 2028

Bachelor of Science in Computer Engineering, GPA: 3.9/4.0

Tallahassee, FL

- Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming

Competitive programming Gold Medalist, 1st in Division 2 of 2024 ICPC North America South Division

EXPERIENCE

Software Engineer Intern

Nov 2025 – Nov 2025

Interested Opportunity Engine (Early-Stage startup)

Tallahassee, FL (Remote)

- Connected a Twilio number to GPT-4o-mini at 1.8-second latency using Python, Vocode, and FastAPI
- Fixed a Vocode bug that dropped all calls after 2 seconds, restoring stable calls across 10/10 runs
- Delivered a working prototype with a 90-second demo, enabling the team to integrate their own Mastra agent; the company raised seed funding the following month

Data Scientist Intern

May 2025 – Jul 2025

FPT Telecom

Hanoi, Vietnam

- Built a Random Forest predictive model at 86% accuracy on 3 months of unseen data with regression signals
- Pulled vnstock API data into a 60+ feature training set, deriving 1–14 day rolling signals for the model
- Defined a 0.4% per-trade cost model, clearing the model for deployment on \$4,000 of real capital
- Built a data pipeline ingesting 20 years of indicators across 8 equity sectors, driving feature selection in Jupyter

PROJECTS

Local Lens | TypeScript, Google Analytics, AWS, PaddleOCR

Dec 2025 – Present

- Shipped a Chrome extension with 290+ installs and 60 weekly active users, tracking installs, uninstalls, and user counts over time via Google Analytics
- Implemented a dual-engine OCR pipeline using a 20 MB model for plain-text extraction (3–10 seconds) and a 146 MB model for tables and bold text (18–47 seconds)
- Built a Vitest + Playwright headless Chromium test suite checking expected UI visuals and quantization parity, validating 830 KB of bundle savings at zero quality loss
- Maintained an AWS S3 + CloudFront onboarding and feedback site with 99.9% uptime

LinkedIn Outreach | Python, pytest, Information Retrieval

May 2026 – Present

- Developed a Claude Code skill that reduces outreach drafting time by 60% (25 to 10 minutes)
- Architected a tier-based few-shot retrieval system, giving each draft 10 same-tier examples and persistent memory
- Maintained an 11-minute pytest suite and QA script flagging 300-character limits and cringe patterns
- Engineered a human-in-the-loop system that diffs drafts against hand-edited versions, distilling voice into voice.md

Autoly | Python, SQLite, SQL, PyMuPDF

May 2025 – Jul 2025

- Built an 8-step guided web application that digitizes Vietnam's official background form, replacing 2–3 hours of fragile Word templates with a 20-minute validation-driven workflow
- Stored user's progress and information in SQLite via Python's sqlite3, with lightweight authentication
- Deployed on Render with zero-downtime updates and tested by 50 users

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, C++

Data & Analytics: SQL, Pandas, NumPy, Google Analytics, Social Media Analytics, Data Pipelines

ML & Modeling: Scikit-learn, Random Forest, Regression, Statistical Modeling, Predictive Analytics

Developer Tools: Git, Linux, Docker, AWS, Render, CI/CD
